## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 7 and 8 are objected to because of the following informalities: It appears the language in these claims is already in claim 2. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2-4, 7-9, 11-13, 15, 23-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reid (2,859,061) in view of Sheesley (3,531,133).

Reid discloses a flat sealing ring between two surfaces (see Fig. 19). The sealing ring comprises a deformable base 17 completely covered by a protective layer 18 of PTFE. A stiffening ring 16 is provided on an outer circumference of the core/base. As seen in Figure 18, the height of the ring is less than the height of the base. The ring is harder than the core (col. 4, lines 37-38). The ring and layer are made of the same piece of material. Reid discloses the core/base can have any cross-section (col. 4, lines 34-36) but does not appear to disclose the shape required by the claims. Sheesley teaches a gasket shape comprising a center section 24/25 and first and second wings extending directly from the center (e.g. see Figs. 7 or 11) and having planar surfaces. The center section extends beyond the planes. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify cross section of the

Art Unit: 3676

core/base 17 with the cross-section taught by Sheesley to provide an effective seal that has spaces 25 to receive deformed material.

***Response to Arguments***

4. Applicant's arguments filed 5-6-08 have been fully considered but they are not persuasive.

Reid teaches a seal can be completely covered in PTFE and a stiffening ring can be made integral with it. Reid says any shape seal can be used. Sheesley, Papenguth, and Olson each teach a seal with a core having wings. This shape is known and would provide an expected result, i.e. a seal. Sheesley further teaches that the cavities 25 receive deformed material and improve the seal.

***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
